

A D dimensional C_m real manifold M_D is a set of d^d , real manifold M_D

Definition: A D dimensional C_m real manifold M_D is a set:

1. Each point $p \in M_D$ lies in at least one O_D , i.e., the set (O_D) covers M_D :
2. For each O , there is a one-to-one, onto, map $\alpha: O \rightarrow U_D$, where U_D is an open subset of R^D (linear D -dimensional space):
3. If any two sets O_T and O_O overlap, we can consider the map $\sigma^{-1} \circ \alpha$ de notes
